Title:	Thorough inspection of T-source issues
Status:	Individual Contribution on IRG #58
Action:	To be considered by IRG and TCA

Introduction

After publishing IRGN2519(aka T-source issues, CheonHyeong Sim(later modified as TianHeng Shen) and Yi Bai, 2021.10), we discovered some new issues. In order to solve all the issues, we made a thorough inspection of T-source. Since Unicode5.2 is the first version to have the MulticolHan charts, we compared all the T-source glyphs in Unicode5.2 with the corresponding characters in Unicode14.0, and discovered 480 pairs of characters which have major changes. And most of the changes are from Unicode6.0.

We will divide these characters into 3 groups as the following catalogue according to our own judgment. The classification is only for reference, as the opinion of IRG or TCA may be different from ours.

Catalogue

1. Changes in URO and ExtA—C
 - 1.1 Incorrect glyphs
 - 1.2 Glyphs difficult to judge correct or incorrect
 - 1.3 Corrected glyphs
2. Issues of Compatibility Ideographs

1. Changes in URO and ExtA—C

1.1 Incorrect glyphs

The following 82 characters in the form are considered to be wrong in Unicode14.0. We will give the reasons as comments in the form below for reference. We default that the glyph of Unicode5.2 is the right one unless an extra comment is given.

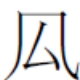

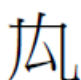

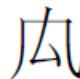

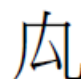

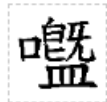

Unicode	Glyph (Ming LiU)	Glyph (5.2)	Glyph (14.0)	Comments
56DF				    明體 楷體 宋體

				According to 小篆, 明體 seems to be right.
5AD0	嫵	嫵	嫵	According to the regional conventions in Taiwan, 丿 of 女 should pass through 一.
5DFD	巽	巽	巽	 (T1-5E78, U+5DFD)  (T6-4837, U+2F884) <p>All the other characters with the component 巽 are shown as 巽 but not 巽, so we consider it as a mistake.</p>
64D3	攙	攙	攙	 <p>The external part of 匱 is 匚 but not 匚, so 宋體 seems to be wrong.</p>
820B	豐	豐	豐	 <p>The Unicode14.0 glyph does not match CNS11643.</p>
8FBC	込	込	込	 <p>The Unicode14.0 glyph is similar to 込(U+3214B).</p>
9255	鉅	鉅	鉅	 <p>The external part of 匚 is 匚 but not 匚, so 楷體 and 宋體 seem to be wrong.</p>
99C6	駙	駙	駙	 <p>The external part of 區(區) is 匚 but not 匚, so 宋體 seems to be wrong.</p>

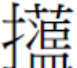

3538	匱	匱	匱	  The radical is 匚, so 楷體 and 宋體 seem to be wrong. Unicode5.2 is also wrong.
3966	慇	慇	慇	  The external part of 匱 is 匚 but not 匚, so 宋體 seems to be wrong.
3A24	推	推	推	  The external part of 匱(匱) is 匚 but not 匚, so 宋體 seems to be wrong.
3AE4	𣎵	𣎵	𣎵	  (T6-3167, U+3AE4)   (TF-2B38, U+2F8D1) Also see chapter 2 in this document.
3BE1	𪗇	𪗇	𪗇	  The left part is 黍 according to CNS11643, but that is absolutely wrong. The glyph has not changed since Unicode6.0, but the 6 th stroke seems to be strange, and the strokes of the right part seem to be too thin. We suggest TCA consider fixing the glyph back to Unicode5.2.
3C3C	𪗈	𪗈	𪗈	  The external part of 匱 is 匚 but not 匚, so 宋體 seems to be wrong.

3CE4	洊	洊	洊	<p>According to the regional conventions in Taiwan, the 3rd stroke of 洊 is ㄣ.</p> <p>Unicode5.2 is also wrong.</p> <p>We suggest TCA consider fixing it as 洊.</p>
3EEB	璚	璚	璚	<div>璚璚璚</div> <div>明體 楷體 宋體</div> <p>The Unicode14.0 glyph does not match CNS11643.</p>
3FC4	癥	癥	癥	<div>癥癥癥</div> <div>明體 楷體 宋體</div> <p>The external part of 医 is 匚 but not 匚, so all the three glyphs seem to be wrong.</p>
4115	褡	褡	褡	<div>褡褡褡</div> <div>明體 楷體 宋體</div> <p>衤, 水, 田 (Ver. CNS11643_2_94)</p> <p>The Unicode14.0 glyph does not match the components listed in CNS11643.</p>
4301	纓	纓	纓	<div>纓纓纓</div> <div>明體 楷體 宋體</div> <p>(T4-4C44, U+4301)</p> <div>纓纓纓</div> <div>明體 楷體 宋體</div> <p>(TF-5137, U+2F96D)</p> <p>Also see chapter 2 in this document.</p>

2. Issues of Compatibility Ideographs

2.1 Characters mentioned in Chapter 1

There are two characters mentioned in chapter 1 with the issues of the corresponding compatibility ideographs.

Unicode	Comments
U+3AE4 & U+2F8D1	U+3AE4 was 𡗗 until Unicode5.2, and changed to 𡗗 from Unicode6.0, which became the same as U+2F8D1.
U+4301 & U+2F96D	U+4301 was 𡗘 until Unicode5.2, and changed to 𡗘 from Unicode6.0, which became the same as U+2F96D.

We suggest TCA consider choosing one of the following two plans:

1. Fix the glyph of T6–3167 and T4–4C44 back to Unicode5.2(aka the 明體 glyph in CNS11643).
2. Keep the glyph on U+3AE4 and U+4301, and change the source references to TF–2B38 and TF–5137, meanwhile, change both the glyphs and the source references on U+2F8D1 and U+2F96D.

2.2 Other issues

As same as the characters with the source references HU–2XXXX or TU–2XXXX in the CJK Compatibility Ideographs Supplement block now, there are several other characters which can be moved away from this block and change to TU–2XXXX. See below.

Also, we want to know if TCA could update the font in this block (also for U+5FF9 and ExtA+, because they were moved from this block) to a higher quality one.

Appendix. G-source issues mentioned above

For U+2633B and U+2714A, not only the T-source glyphs but also the G-source glyphs are wrong. The evidences in 康熙字典同文書局原版 was given above since the G-source references of the two characters are referred to GKX. We suggest China consider fixing the two glyphs to match the evidence.
